

Sebastian Stanton

Junior Full-Stack Developer - JavaScript / React / Python

Cape Town, South Africa • szstantondev@gmail.com • 079 244 8774

linkedin.com/in/szstanton • github.com/szstanton • szstanton.com

PROFESSIONAL SUMMARY

Junior full-stack developer with a HyperionDev Full Stack Web Developer certification, building on Python, SQLite, and object-oriented programming from an earlier software engineering bootcamp. Three full-stack MERN applications and a TypeScript portfolio, all tested, deployed, and live on their own domains. Brings 9 years in medical aid administration, in fast-paced, high-accuracy, customer-facing roles, with a consistent record of process improvement, self-directed learning, and clear communication.

TECHNICAL SKILLS

- **Languages:** JavaScript (ES6+), Python, HTML5, CSS3
- **Frontend:** React (Hooks, Router, State, Form Validation), Bootstrap, Responsive & Accessible Design
- **Backend:** Node.js, Express.js, REST APIs, JWT Authentication, Middleware
- **Databases:** MongoDB, Mongoose, SQL, SQLite
- **Tools & Practices:** Git & GitHub, CI (GitHub Actions), npm Workspaces, Automated Testing (Vitest)
- **Currently learning:** TypeScript, Tailwind CSS, PostgreSQL, Next.js

FEATURED PROJECTS

Portfolio - TypeScript Personal Site

[\[Website\]](#) · [\[Code\]](#)

- Registered and configured the szstanton.com domain, with subdomains routing to my other live projects. Five routes with per-route code splitting, light and dark themes, and a serverless contact form (Vercel Function + Resend) with validation on both sides, rate limiting, and spam protection.
- Wrote it end to end in strict-mode TypeScript. Audited the deployed site with Lighthouse and fixed the accessibility and performance issues it raised.
- Designed in restrained art deco with gold accents, pairing Josefin Sans with Manrope for body text. Every colour is defined once with a light and a dark value, and pages can be changed by arrow key or swipe.

Tech: React · TypeScript · Vite · Tailwind CSS · React Router · Vercel Functions

To-Do Tasks App - Multi-User Task Manager

[\[Live Demo\]](#) · [\[Code\]](#)

- Built secure user registration and login with JWT-based authentication, hashed passwords, and protected routes, so every account reaches only its own tasks.
- Implemented soft deletes and a 24-hour recycle bin using MongoDB TTL indexes instead of a scheduled job, letting the database handle expiry itself. Added drag-and-drop reordering, filtering, sorting, and a demo account.

Tech: React · Node.js · Express · MongoDB · JWT · Context API · Vitest

iTunes Search App - Full-Stack Media Search

[\[Live Demo\]](#) · [\[Code\]](#)

- Built a full-stack search over the public iTunes API across eight media types (music, albums, music videos, podcasts, audiobooks, TV shows, software, and ebooks), with user accounts, favourites, search history, and a demo account.
- Rebuilt from a session-only front end into a full-stack app so favourites persist against an account, and designed a light and dark elevation system (gradients, shading, tinted shadows) across the interface.

Tech: React · Vite · Tailwind CSS · Node.js · Express · MongoDB · JWT · Vitest

Jobs App - Maintenance Job Tracker

[\[Live Demo\]](#) · [\[Code\]](#)

- Built a job-tracking tool with submission forms (description, location, priority), status filtering, combined search, and batch status updates across multiple records.
- Extended it from a front-end-only app to full-stack with an Express/MongoDB API via Axios. Overdue status is computed per render rather than stored, so nothing has to be scheduled and nothing goes stale.

Tech: React · Node.js · Express · MongoDB · Axios · REST APIs · Vitest

ADDITIONAL PROJECTS: JAVASCRIPT / REACT

- **Event Planner** [\[Live Demo\]](#) · [\[Code\]](#)
React app for creating, managing, and tracking personal events, with a dashboard view, validation, and Context API for state management.
- **The Cart** [\[Live Demo\]](#) · [\[Code\]](#)
React e-commerce app with routing, cart logic, and Formik-based form validation.
- **Chef's Favorites** [\[Live Demo\]](#) · [\[Code\]](#)
Ingredient-based ordering site. Enter a main ingredient and the "chef" selects a dish, with pending-order tracking. Built with HTML5, CSS3, and JavaScript, consuming TheMealDB API.
- **E-Commerce (Web Storage)** [\[Live Demo\]](#) · [\[Code\]](#)
Browser data persistence using cache, cookies, session storage, and local storage, with a service worker handling the caching.

ADDITIONAL PROJECTS: PYTHON

- **Expense & Budget Tracker** [\[Code\]](#)
Menu-driven CLI app using SQLite, with full CRUD for income and expenses, category filtering, input validation, per-category budget tracking against actual spend, and a financial-goals calculator.
- **E-Bookstore App** [\[Code\]](#)
CRUD-based catalogue management tool built with Python and SQLite.

EDUCATION

HyperionDev - Full Stack Web Developer Bootcamp [Verify]	Mar 2026 - Jul 2026
HyperionDev - Software Engineering Bootcamp [Verify]	Dec 2023 - May 2024
Sololearn - Python & Web Development Courses	May 2023 - Dec 2023

PROFESSIONAL EXPERIENCE

Independent Developer	Aug 2026 - Present
• Building and deploying full-stack applications, including the four projects above, across Vercel, Render, and MongoDB Atlas.	
Medscheme - Bonitas, Digital Livechat Agent	Mar 2023 - Jul 2026
• Selected as one of the founding agents for Bonitas' first Livechat system; developed message templates and process standards later adopted team-wide. • Identified and documented recurring issues with the Livechat system in collaboration with management, and was recognised for consistently proposing practical solutions.	
Medscheme - Boncap, Back-Office Support	Sep 2019 - Feb 2023
• Handled claims assessment and membership administration; contributed to the development of "OneMind", a shared process-reference tool used by all Bonitas agents. • Earned remote-work privileges through consistently high performance and received 3 performance awards.	
Medscheme - Boncap, Admin/Call Agent	Feb 2018 - Aug 2019
• Consistently ranked among the top performers across 45+ agents while exceeding service-level targets and handling 60+ requests/day. • Authored a training guide for new agents to speed up onboarding, later adopted as a team resource.	
Earlier Experience	Jan 2014 - Jan 2018
• Bonitas, Non-Clinical Reviewer - Managed pre-authorisation requests while maintaining high accuracy and communicating effectively with healthcare professionals. • Delivery Xtreme, Call Operator - Processed high volumes of customer orders in a fast-paced, time-sensitive environment.
